

Water Colour Rubbings on Fabric

Derwent Inkstone Blocks and Cedar Canyon Rubbing plates can be used together to create beautiful images onto fabric.

Lightly spray your plate with Nuart Spray Adhesive and place fabric over plate.

Create the design by dragging the block across the surface in the one direction.

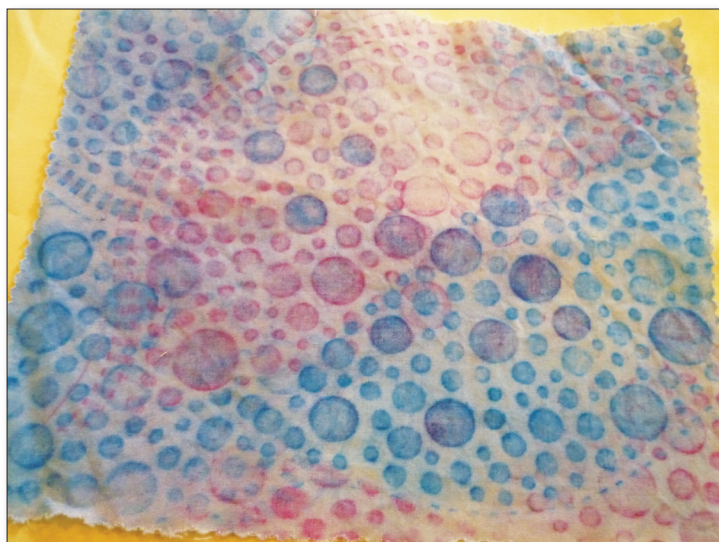

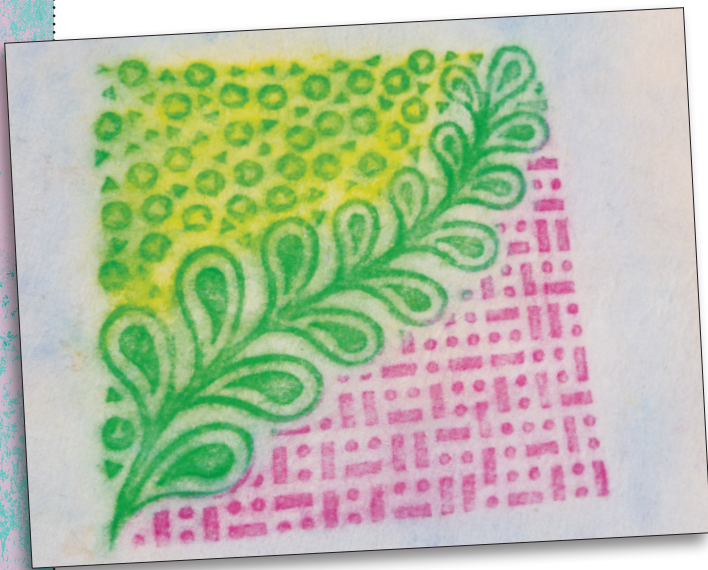

Blending many colours together can be very effective.

Lightly spray the coloured surface with water, ensuring all pigment is thoroughly dissolved.

Allow the fabric to dry and iron to make colourfast.

(Not all pigments will be totally colourfast. Experimenting with different types of fabrics and colour combinations is a requirement for fastness)

Any undissolved pigment will wash away .
