

Gelli Plate Image Transfer / Resist Printing

1. Apply a thin layer of a dark coloured acrylic paint onto your Gelli Plate using a roller and lightly cover the plate.
2. Lay your magazine print on top of the Gelli Plate and rub well (using either your hand or a clean roller).
3. Carefully and slowly remove the magazine print. If you can see that it hasn't transferred when you lift a corner, place it back down and roll again.
4. Allow the Gelli Plate to dry (5 minutes is ample - longer is fine too).
5. Using a lighter coloured acrylic paint, apply it to the dried Gelli Plate with a roller in a thin layer (you should still be able to see the print through the paint).
6. Put your paper on top of the Gelli Plate and rub well in order to pick up the print.
7. Again, remove slowly.
8. Congratulations! You have just done an image transfer using a Gelli Plate!
